

Data Linkage Research Conversation Series 2013

3.00pm to 5.00pm, Friday December 6

**Kerry Packer Civic Gallery - University of South Australia
City West campus
Hawke Building level 3
55 North Terrace Adelaide**

For the final session of the 2013 *Data Linkage Research Conversation Series* we will be joined by **Professor Louisa Jorm**, Foundation Professor of Population Health at the University of Western Sydney (at 3.30). Professor Jorm will be discussing her extensive experience with using data linkage for research in a range of areas, including the health of mothers, babies and children, the influence of individual, geographic and hospital factors on the outcomes of indigenous hospital patients, and of course population ageing – the focus of Australia’s largest epidemiological cohort study, the **45 and Up Study**.

SA NT DataLink, along with the University of South Australia, would like to extend a warm welcome to all researchers, data custodians and policy makers, and practitioners to join us for what is sure to be a fascinating and insightful discussion on the wide ranging possibilities of data linkage research.

This session is sure to prove relevant to those interested Professor Jorm’s research areas, and the potential for data linkage research to impact the health and wellbeing of our population.

Refreshments will be served throughout the stand-up session and guests are encouraged to use the event as an informal networking opportunity with others interested in this field.

**Please RSVP via email to RSVP.SANTDatalink@unisa.edu.au
or phone Kyleann Badcock on 8302 1604**
