Purpose and Details of the ED Collection{ TC "Purpose and Details of the ED Collection" \f C \l "1" }

Overview

All public hospitals in South Australia are required to submit information about patient presentations to Emergency Departments, known as the Emergency Department Data Collection (EDDC).

Information is collected, processed and disseminated in accordance with South Australian Health Data Management Protocols for Data Custodians

Although no patient names or addresses are stored in the ED database, the sensitive nature of such clinical information is recognised. Personnel and systems are orientated to maintain confidentiality in line with SA Health confidentiality and data security policies.

Data submitted to EDDC should be timely, accurate and complete, reflecting the demographics and clinical details of patients seen at ED Departments. These guidelines represent SA Health policy and are intended to be a reference for all hospital personnel who are involved in the collection and use of ED data.

Introduction

Covered in this section is information regarding:
Purpose of the ED Data Collection
Unit of Measurement, Coverage and Scope
Items Collected
Rules for ED Patients

Purpose of the Collection

EDDC contains de-identified demographic, administrative and clinical data detailing presentations to Emergency Departments (ED) at public hospitals in South Australia.
The data collection provides the SA Health with a centralised repository of key data elements, which may be used to better understand and analyse ED activity and performance within the public health system.

The EDDC is based on “Non-Admitted Patient Emergency Department Care” National Minimum Data Set (NMDS). The purposes of collecting this data in SA are to:
Enable the collection of data for deriving ED performance indicators:
Enable comparisons of performance in respect to access to services, quality clinical outcomes, patient management, customer satisfaction and cost effectiveness; and
Satisfy the requirements for collecting non-admitted patient ED under the Australian Health Care and National Health Information Agreements (AHCA & NHIA)

Purpose and Details of the ED Collection continued

Unit of Measurement

The unit of measurement of the EDDC is the patient's presentation to a Emergency Department. A presentations includes all presentations to the ED except for those patients who are Dead on Arrival and do not receive resuscitation.
Presentations end with the patient's physical departure from the ED.

Coverage and Scope

The EDDC commenced in 2003. Although data was not routinely submitted until May 2004, data exists in the collection from January 2000. However, only data from the 2003/04 financial year onwards is available from the Central Data Warehouse/Health Information Portal (CWD/HIP).

The scope of this data collection currently covers the Emergency Departments of all the major metropolitan public hospitals. Data is currently collected from:

Metro
Flinders Medical Centre (FMC)
Lyell McEwin Hospital (LMH)
Lyell McEwin Hospital – Women's Assessment Unit (LMH-WAU)
Modbury Hospital (MPH)
Noarlunga Health Service (NHS)
Repatriation General Hosspital (RGH)
Royal Adelaide Hospital (RAH)
The Queen Elizabeth Hospital (TQEH)
Women's and Children's Hospital – Paediatric Services (WCH-Paed)
Women's and Children's Hospital – Women's Assessment Services (WCH-WAS)

Note that WCH-WAS and LMH -WAU are not technically considered as ED services.

All Country Hospitals with emergency departments are included. See Appendix 4.

Exclusions and Clarifications

The following patients are excluded from the EDDC:
Patients who present at ED but are Dead on Arrival and do not receive resuscitation.

Data Items Collected in EDDC{ TC "Data Items Collected in EDDC" \f C \l "1" }

Introduction

This section provides definitions of the concepts underlying the EDDC, and the items derived from the data collected by the Department.
The definitions contained in this section are based, wherever possible, on the National Health Data Dictionary (NHDD).
Each code set submitted by a hospital is mapped to State code sets which in turn are mapped to National code sets (as applicable)
All hospitals except FMC and MPH use codes and descriptions from the HASS-EDIS Corporate Reference File.
The following code files have been developed in EDDC with mappings to State and National codes as appropriate.

Key Definitions

Mandatory Status
The requirement for reporting to EDDC.
The items below must be reported for every presentation at ED for every patient.
.

Data Item details{ TC "Data Item details" \f C \l "1" }

ITEM Name	ITEM Description	Corporate Code Values	SA Health Metadata Repository link
Accompanying Person	The person who has accompanied the patient to the ED	Collected but not used	Not in ED Repository
Arrival Mode – Transport	The Mode of transport by which the patient arrives at the ED	1-Air Ambulance; 2-Helicopter; 3-Ambulance Service; 4-Community/Public Transport; 5-Private Car; 6-Police Vehicle; 7-Walk In; 8-Other; 9-Volunteer Transport; 10-Taxi; 99-Unknown/Not State .	Episode of care—arrival mode, code NN
Clerical Date	Date the patient's details are checked and recorded by clerical staff in the ED.		Patient—clerical date, DDMMYYYY
Clerical Time	Time the patient's details are checked and recorded by clerical staff in the ED		Patient—clerical time, hhmm
Compensable Status (eg MVA, Workcover)	A patient who is entitled to receive or has received a compensation payment with respect to an injury or	C-Compensable-Other; CNM-Non-Medicare; CSH-Conpensable-Shipping; CV-Compensable-Vehicle	Patient—compensable status, code A[AA]

	disease or • is entitled to claim damages under Motor Vehicle Third Party insurance or • is entitled to claim damages under worker's compensation; or • has an entitlement to claim under public liability or common law damages	Accident; CW-Compensable-Workers Compensation; DVA-Dept of Veterans Affairs; 9-Unknown	
Country of Birth	The country in which the person was born	This version is from 2008, wheras the Value Domain for the data Element in the Emergency Department Data Collection uses SACC 1998 codes	Patient—country of birth, code NNNN
Date of Birth	The date of birth of the patient		Patient—date of birth, DDMMYYYY
Admission Request Date from Nov 2011	Point in time at which ED clerical staff commence the process of finding a ward locale for a patient who is to be admitted		Patient admission—decision to admit date, DDMMYYYY
Admission Request Date from Nov 2011	Point in time at which ED clerical staff commence the process of finding a ward locale for a patient who is to be admitted.		Patient admission—decision to admit time, hhmm
Departure Date	The date on which the patient was discharged from ED, indicating the end of the ED episode. Patient may then be discharged form hospital, admitted to a ward, referred to another provider etc (Where the patient had been admitted to the EECU the departure date is the date the patient is discharged from the EECU)		Patient's separation from service—departure from ED date, DDMMYYYY
Departure Time	The time at which the patient was discharged from ED, indicating the end of the ED episode. Patient may then be discharged form hospital, admitted to a ward, referred to another provider etc (Where the patient had been admitted to the EECU the departure time is the time the patient is discharged from the EECU		Patient's separation from service—departure from ED time, hhmm
Departure Referral	The place or person to whom the patient was referred on departure from the Emergency Department	1-Not referred; 3-Other Private Health Practitioner; 4-Hospital OPD; 5-Community Mental Health; 6-Other Community Health; 7-Admission; 8-Nursing Home; 9-Police; 10-Other Hospital; 57-Private Specialist; 58-LMO/GP; 59-OPD-Diabeties; 60-Morgue; 61-Coroner; 98-Other; 99-Not Stated/Unknown	Patient's separation from service—referral destination code NN
Departure Status	The status of the patient at cessation of the non-admitted patient ED service episode	1-Episode complete-Home; 2-Admission to Ward; 3-Admission within ED; 4-Transfer out of this hospital to another; 5-Left at own risk after treatment started; 6-Did not wait to be seen (DNW); 7-Died within ED (includes DOA with resus); 8-Dead on Arrival, no	Patient's separation from service—nature of separation, departure status code NN

EDDC Data Item Details

		resus; 9-Episode complete-Nursing Home, 10-Admission to EECU; 85-Advised of Alternative Treatment Options (AATO); 98-Episode complete-Other; 99-Not Stated/Unknown	
Detained Patient Status	Indicates if the patient was being detained under mental health legislation for the purpose of assessment or provision of appropriate treatment or care.	Collected but not used	Not in ED repository
Diagnosis	Diagnosis of patient's condition by Medical Officer in ED	ICD-10AM 8th Edition – all EDDC records are mapped to this current edition.	Patient—diagnosis type, code AN[NNN]
EECU Admit Date	The date on which the patient was discharged from ED, indicating the end of the ED episode and admitted to the Extended Emergency Care Unit (EECU) of the hospital.		Episode of care - EECU Arrival Date and Time, DD/MM/YY hh:mm:ss
EECU Admit Time	The time at which the patient was discharged from ED, indicating the end of the ED episode and admitted to the Extended Emergency Care Unit (EECU) of the hospital.		Episode of care - EECU Arrival Date and Time, DD/MM/YY hh:mm:ss
Gender	The gender of the patient	1-Male; 2-Female; 3-Intersex or Indeterminate; 9-Not Stated/Unknown	Patient—gender, code N
Hospital Identifier	Identifier for the establishment in which episode or event occurred. Each separately administered health care establishment to have a unique identifier at the national level	0001-WCH - Paed; 0003-WCH; 0005-FMC; 0014-TQEH; 0018-RGH; 0019-RAH; 0027-LMH; 0030-MPH; 0033-NHS	Hospital—administrative identifier code, NNNN
Indigenous Status	Indicates whether or not a person identifies themselves as being of Aboriginal and/or Torres Strait Islander origin. An Indigenous person is a person of Aboriginal and/or Torres Strait Islander descent who identifies as an Aboriginal and/or Torres Strait Islander person.	1-Aboriginal but not Torres Strait Islander origin; 2-Torres Strait Islander but not Aboriginal origin; 3-Both Aboriginal and Torres Strait Islander origin; 4-Neither Aboriginal nor Torres Strait Islander origin; 9-Not Stated/inadequately described	Patient—indigenous status, code N
MDB	The Major Diagnostic Block (MDB) assigned to the presentation.	Per IHPA MDB version 1.4.2.1 Grouper	Not in ED repository
Patient Unit Number	The Patient Unit Record Number, also known as the Unit Record Number (or URN), is a unique identifying number which is allocated to a patient on the first visit or admission to the hospital/health care service and retained for all subsequent admissions and treatments at that hospital.		Patient admission—patient unit record number, identifier N(10)

Postcode of Usual Residence	Postcode of patient's usual place of residence		Patient—home postcode, code NNNN
Presenting Problem	Patient's Presenting Problem or Complaint as assessed by the Triage Nurse.	0100-Cardiovascular/Chest; 0200-Drug/Drug Reaction; 0300-Endocrine/Metabolic; 0400-ENT/Oral; 0500-Eyes; 0600-Abdomen/Gastrointestinal; 0700-Gynae/Female Pelvis (non pregnant); 0800-Haematology; 0900-Systemic Infection; 1000-Male Pelvis/Male reproductive System; 1100-Musculo-Skeletal; 1200-Head-Neurology/Neurolgical; 1300-Obstetrics; 1400-Poisoning; 1500-Psychosocial; 1600-Urology; 1700-Respiratory; 1800-Skin (Integument); 1900-Other Complaint (not elsewhere specified); 2000-Abrasion-Single Trauma; 2100-Amputation-Single Trauma; 2200-Bites//Stings-Single Trauma; 2300-Blunt Injury-Single Trauma; 2400-Burn/Scald-Single Trauma; 2500-Contusion/Soft Tissue Injury-Single Trauma; 2600-Crush-Single Trauma; 2700-Deformity/Swelling-Single Trauma; 2900-Fracture/Dislocation-Single Trauma; 3000-Laceration-Single Trauma; 3100-Penetration-Single Trauma; 3300-Other Non-Specified-Single Trauma; 4000-Multiple Trauma; 4600-Renal; 9999-Not Stated/Unknown	Patient—presenting problem group, code A[42] Also refer to Appendix 2
Residential LHN	The LHN of the patient's residential address derived from the patient's SLA.	303 – CHSALHN; 310 – CALHN; 311 – NALHN; 312 – SALHN; 999 – UNKNOWN	Not in ED repository
Referring Hospital	Referred by details - who or which unit referred the patient to the ED.	Relevant SA Hospital Identifier code; 5100-ACT; 5200-NSW; 5300-NT; 5400-QLD; 5500-TAS; 5600-VIC; 5700-WA; 8000-Other; 8888-Not Referred; 9999-Unknown	Episode of care—referring hospital name, code NNNN
SA2	The statistical area of the patient's usual residence.	A valid SA2 as described by ABS.	Not in ED repository
Seen by Doctor Date	The date on which the patient was seen by a treating doctor in ED.		Episode of care—seen by date, DDMMYYYY
Seen by Doctor Time	The time at which the patient was seen by a treating doctor in ED.		Episode of care—seen by time, hhmm
Seen by Nurse Date	The date on which the patient was seen by a treating nurse in ED.		Episode of care—seen by date, DDMMYYYY

EDDC Data Item Details

Seen by Nurse Time	The time at which the patient was seen by a treating nurse in ED		Episode of care—seen by time, hhmm
Source of Referral	Who referred patient to ED	1-Self/Family/Friends; 2-GP; 3-Police; 4-Hospital; 5-Private Medical Specialist//Other MO; 11-Nursing Home; 12-Locum Service; 13-Community Health; 15-First Aid Provider; 30-Disaster; 31-Other Department in this Hospital; 32-Other Private Health Provider; 34-Hostel; 35-ED Staff (for review); 36-Coroner; 37-SA Gov Health Call Centre; 98-Other; 99-Not Stated/Unknown	Patient admission—source of referral code, N[N]
Suburb/Locality of Usual Residence	Suburb or Locality (eg small town) where patient usually resides		Patient—home suburb/locality, identifier X[20]
Triage Category	The urgency of the patient's need for medical and nursing care, using a code set by the Australian College of Emergency Medicine	1-Resuscitation; 2-Emergency; 3-Urgent; 4-Semi-Urgent; 5-Non-Urgent	Patient—triage category, code N
Triage Date	The date on which the patient is triaged.		Episode of care—triage date, DDMMYYYY
Triage Time	The time at which the patient is triaged.		Episode of care—triage time, hhmm
Type of Visit to Emergency Department	The reason the patient presents to the Emergency Department.	1-Emergency; 2-Trauma; 3-Planned Review; 4-Unplanned Review; 5-Planned Admission; 98-Other; 99-Unknown	Episode of care—reason for ED visit, code NN
URG	The Urgency Related Group (URG) assigned to the presentation.	Per IHPA URG version 1.4.2.1 Grouper	Not in ED repository

Emergency Department Data Collection Related Terminology{ TC "Emergency Department Data Collection Related Terminology" \f C \l "1" }

ED Presentation	The episode of a patient's presentation to ED, and the patient's physical departure from ED or EECU. During this episode, a patient may be triaged, or leave without being seen or treated, or may leave at own risk, or may be admitted from ED as an in-patient to a ward at that hospital, or may be admitted to EECU, or the Inpatient overflow unit.
Presentation Date/Time	Presentation Date/Time is the earliest of the Triage Date/Time and the Clerical Date/Time. Episode of care—presentation date, DDMMYYYY
Seen by Date/Time	Seen by Date/Time is the earliest of the Nurse Seen by Date/Time and the Doctor Seen by Date/Time
Medical Decision to Admit Date/Time	The Medical Decision to Admit Date/Time is the date and time when the doctor or nurse decides to admit the patient to the hospital (as an in-patient) from the ED.
EECU Admit Date/Time	The date and time at which the patient is admitted to a hospital's Extended Emergency Care Unit. Note that MPH does not have a true EECU Unit.
EECU Inpatient Overflow	EECU Inpatient Overflow patients are those waiting for an in-patient bed, and are not true EECU patients. For EECU Inpatient overflow records, the Visit time is from the Presentation Date/Time to the EECU Admit Date/Time
Visit Time	Visit Time is the time from Presentation Date/Time to Departure Date/Time
Departure Date/Time	The date and time at which the patient physically departs from EECU or ED
Wait Time	The time between the patient's presentation in ED and first being seen by either the Doctor or Nurse.
Did not wait	A patient presents to ED and has a clerical and/or triage Date/Time recorded, but leaves before being seen by Doctor.
Left at Own Risk	A patient presents to ED and has a clerical and/or triage Date/Time recorded, but leaves before treatment is completed or medical decision is made.
PECU	Royal Adelaide Hospital have a Psychiatric Emergency Care Unit and use the EECU Admit Date/Time to record a patient's presentation in the PECU. (PECU patients have an original departure status code of 51 to distinguish them from EECU patients.
Date and Time fields	For all of the chronological data fields, such as Triage, Seen By, Clerical, Decision to Admit, Depart, EECU admit, the data in the .xml files is submitted in a combined field with Date and time. Once the ED data is processed, validated, and published on the Web site, the time and date fields for each chronolgical data item can be split into separate date and time fields for each data element.

Guidelines for Submission of ED Data{ TC "Guidelines for Submission of ED Data" \f C \l "1" }

Overview	All metropolitan public hospitals must submit Emergency Department Activity data to on a monthly basis in accordance with the data standards and submission schedule set by Information Assembly, SA Health.
Introduction	This section provides information regarding Methods for submissions and due date for submissions Data submission standards Penalties
Methods of Submission Due date	Approved Hospitals are required to submit monthly data electronically via e-mail, by the 5th working day of the month, as .xml files or .txt files.
Email address for submissions	Email Submissions: HEALTH:DMUED@health.sa.gov.au
Data Standards	All data submitted to EDDC must conform to the standards set by Information Assembly, SA Health. This means all required items must be completed and all responses must be within the valid range of codes. Electronic submissions must also comply with the standard layout specifications and variable coding structures relevant to the collection format, and should be encrypted.
Electronic Submission File Format	Data that is not in the specified format for the collection will need to be resubmitted in the correct format. Note: Testing of the EDDC data extract layout must be included as part of implementing new versions of patient administration systems.

Record Format and Data Type[1]{ TC "Record Format and Data Type" \f C \l "1" }

1. URG, MDB, SA2 and Residential LHN are all derived (text) fields post submission. Hence are not included in the hospitals submission to the department.

Data Quality / Data load / Error Checks / Validations / Corrections / Business Rules{ TC "Data Quality / Data load / Error Checks / Validations / Corrections / Business Rules" \f C \l "1" }

Introduction	This topic provides information on the data quality checks applied to data submitted to the Emergency Department Data Collection.
Data Quality Checks	All data submitted to SA Health for EDDCs subjected to data quality checks. These ensure the business rules (instructions) have been adhered to and identify data that requires correcting. A standard suite of data quality (input edit) checks is applied to new data submissions. The EDDC data quality checks identify data errors (logical inconsistencies and invalid codes) and unusual circumstances (queries).
Corrections	All data errors must be corrected in EDDC as soon as possible Note: See Data Quality Checks and Error Correction Section for details about making corrections to records with errors.
Late data submission	There are no financial penalties imposed on hospitals for late submission, however, should submission be delayed significantly there is a risk that hospital data will not be available for pivotal monthly reporting, impacting on operational and strategic decision making.
Exemptions from submission deadlines	An exemption from submission deadlines may be negotiated with the Director, Information Management Data and Reporting Services if a hospital, or group of hospitals, is unable to meet a due date
Exemption Approval	All applications for exemptions must be approved by the Director, Information Management Data and Reporting Services. They must be made in advance of the due date.

Data Load Process and Data Quality{ TC "Data Load Process and Data Quality" \f C \l "1" }

Overview

This section provides details about the process of data load, and the data quality checks applied to data once it is submitted to the EDDC. It also provides information about correcting records with errors.

Data is loaded from each hospital file into the EDDC holding file using the EDDImport program, which checks for invalid data in the holding area and uses specific checks as well as looking up values against the lookup codes table. The following listed checks are of importance, many more are used but do not affect the quality of the data or the outcome. Any data that meets any of the following criteria are reported in an error report and this is then reported to each hospital for feedback/correction.

Error reports are generated for the following date fields which do not comply with the business rules:

Triage Dates > Seen By Doctor Dates
Triage Dates > Seen By Nurse Dates
Seen by Doctor Dates > Departure Dates
Seen by Nurse Dates > Departure Dates
Departure Dates = null

The following code fields all report an error if the field is either null or does not have a valid code:

Arrival_Mode_Code	Compensable_Status_Code
Country_Of_Birth_Code	Departure_Referral_Code
Departure_Status_Code	Diagnosis_Code
Employment_Status_Code	Gender_Code
Indigenous_Status_Code	Insurance_Status_Code
Presenting_Problem_Code	Referring_Hospital_Code
Source_of_Referral_Code	Type_Of_Visit_Code
Triage_Category_Code	

Changes are made to the data in the holding area as advised by each hospital.
If no feedback is received from a hospital, the data may be changed as outlined below.

The Seen By Date is populated.
This is determined by taking the earlier of either the Seen By Doctor Date/Time or the Seen By Nurse Date/Time

Null values in any of the code fields below are piped.
Arrival Mode Code, Compensable Status Code, Country Of Birth Code, Departure Referral Code, Departure Status Code, Diagnosis Code Employment Status Code, Gender Code, Hospital Code, Indigenous Status Code Insurance Status Code, Presenting Problem Code, Referring Hospital Code; Source of Referral Code, Type Of Visit Code, Triage Category Code

The stored procedure updates the holding file and replaces NULL values with a ‘|’ (pipe) (or ‘||||’ (4 pipes) in the case of country of birth). The reason for the ‘|’ character to replace null values is for quality assurance and mapping of local code values to State and National code values.

Data Load Process and Data Quality continued

Once all changes have been made, the stored procedure updates the data in the holding file before it is transferred to the EDDC database.

Once transferred: URG, MDB, SA2 and Residential LHN are all derived based on information submitted. URG and MDB by a Grouping program supplied by IHPA; SA2 via the ALVS process in partnership with DPTI; Residential LHN is derived from a patients SLA. Any unknown codes are given a '|' (pipe).

Records of all changes made during this step are kept in the monthly ED Data Quality network files, together with verifications from the sites where data is changed in EDDC which would affect the integrity of the data.

Validations to meet business rules{ TC "Validations to meet business rules" \f C \l "1" }

Below is a table of the validation checks and the manual changes which are made to the data, and the actions which can be implemented to ensure that the data conforms to business rules.

Field	Issue	Action
Patient Unit Number	= null	All records containing meaningful clinical/demographic data relevant to patient's ED presentation must have a Patient Unit Number.
Triage Category 1	Seen within threshold of 2 minutes	Records with Triage Category 1 should not have more than 2 minutes difference between Triage Date/Time and Seen By Date/time. Or If Clerical Date/Time is earlier than Triage Date/Time, no record should have a value greater than 2 minutes. All values greater than 2 minutes must be checked with sites.
Departure Status – did not wait	Triage category 1 and Did not Wait Departure Status	Records with a Triage Category of 1 must not have a departure status of Did not Wait and a Seen by Date/Time. Check correct Departure Status or Triage status with site.
EECU Admit Date/Time	Default date of 1/1/1900	EECU default date of 1/1/1900 is replaced with a null value
Admit Date/Time	Default date of 1/1/1900	Admit Date/Time of 1/1/1900 is replaced with a null value
Presenting problem code	Modbury Presenting problem field is a long field	The standard ED default is applied to Modbury Hospital's Presenting Problem field due to inconsistencies in data captured as free text..
Suburb names	Numeric characters in suburb names	The suburb name should only contain alpha characters, no street numbers. Numerical characters need to be removed from Suburb field.
Departure Date/Time	= null and SA Departure Status=6 (DNW) or 99 (Unknown)	No record can have a null departure time, except those with departure status of Did Not Wait or Unknown.

Field	Issue	Action
Patient Unit Number	= null	All records containing meaningful clinical/demographic data relevant to patient's ED presentation must have a Patient Unit Number.
Triage Category 1	Seen within threshold of 2 minutes	Records with Triage Category 1 should not have more than 2 minutes difference between Triage Date/Time and Seen By Date/time. Or If Clerical Date/Time is earlier than Triage Date/Time, no record should have a value greater than 2 minutes. All values greater than 2 minutes must be checked with sites.
Departure Status – did not wait	Triage category 1 and Did not Wait Departure Status	Records with a Triage Category of 1 must not have a departure status of Did not Wait and a Seen by Date/Time. Check correct Departure Status or Triage status with site.
EECU Admit Date/Time	Default date of 1/1/1900	EECU default date of 1/1/1900 is replaced with a null value
Admit Date/Time	Default date of 1/1/1900	Admit Date/Time of 1/1/1900 is replaced with a null value
Presenting problem code	Modbury Presenting problem field is a long field	The standard ED default is applied to Modbury Hospital's Presenting Problem field due to inconsistencies in data captured as free text..
Suburb names	Numeric characters in suburb names	The suburb name should only contain alpha characters, no street numbers. Numerical characters need to be removed from Suburb field.
	= null and SA Departure Status<>6 (DNW) or 8 (DOA) or 99 (Unknown)	Check for the correct Departure Date and Time with site.
Seen By Date/Time	= null and SA Departure Status=6 (DNW) or 99 (Unknown)	No record can have a null Seen by Date and Time, except those with departure status of 6 or 99. Check the Seen by Date and Time with site
Presentation Date/Time (earliest of either Triage Date/Time or Clerical Date/time)	If Date/Time Diff > minus 30 minutes	Change either the Triage Date/Time or Clerical Date/Time as deemed appropriate. Ensure that date sequencing still correct.
Wait Time (Seen By Date/Time minus Presentation Date/Time)	Negative value	Check for the correct value with the site. Ensure that date sequencing still correct.
	> 1440 minutes (24 hours)	Check for the correct value with the site. Ensure that date sequencing is still okay.
	> Visit Time	Change Departure Date/Time to equal Seen By Date/Time
Visit Time (Departure Date/Time minus Presentation Date/Time)	Negative	Check for the correct value with the site. Ensure that date sequencing still correct.
	High, > 7200hrs (5 days), and the presenting problem is not psychosocial.	If the Visit time is greater than 5 days, and the presenting problem is not psychosocial, confirm the correct value with site, before changing the value.
Birth Date	Compared with any other chronological data. Birth date should be less.	No other date values in the record should be less than the patient's birth date. Check any discrepancies with site.

Field	Issue	Action
Patient Unit Number	= null	All records containing meaningful clinical/demographic data relevant to patient's ED presentation must have a Patient Unit Number.
Triage Category 1	Seen within threshold of 2 minutes	Records with Triage Category 1 should not have more than 2 minutes difference between Triage Date/Time and Seen By Date/time. Or If Clerical Date/Time is earlier than Triage Date/Time, no record should have a value greater than 2 minutes. All values greater than 2 minutes must be checked with sites.
Departure Status – did not wait	Triage category 1 and Did not Wait Departure Status	Records with a Triage Category of 1 must not have a departure status of Did not Wait and a Seen by Date/Time. Check correct Departure Status or Triage status with site.
EECU Admit Date/Time	Default date of 1/1/1900	EECU default date of 1/1/1900 is replaced with a null value
Admit Date/Time	Default date of 1/1/1900	Admit Date/Time of 1/1/1900 is replaced with a null value
Presenting problem code	Modbury Presenting problem field is a long field	The standard ED default is applied to Modbury Hospital's Presenting Problem field due to inconsistencies in data captured as free text..
Suburb names	Numeric characters in suburb names	The suburb name should only contain alpha characters, no street numbers. Numerical characters need to be removed from Suburb field.
Birth Date	= null	If Hospital = WCH-Paed (0001) insert 1/7/2000, for other hospitals –use default 1/7/1950. Check with site for the correct birth date.
Accompanying Person Detained Person Postcode Suburb	= null	Insert '|'
Final Check	= null	All fields are re-checked to ensure there are no null values (exceptions Clerical Date/Time and Seen By DateTime if SA Departure Status = 6 or 99).

Code Field Mapping{ TC "CODE FIELD MAPPING" \f C \l "1" }

Hospitals may use their own codes for the following fields, but these codes are mapped to State and/or National codes using reference tables

EECU Departure Status code for true EECU patients is mapped from Departure Status 3 to Departure Status 10

EECU Departure Status code for true EECU patients at NHS is mapped from Departure Status 2 to Departure Status 50.

RAH PECU Departure Status is updated to 51.

Code File	Hospital or State based	SA Mapping (48083)	NMDS Mapping (48082	Mandatory Status
ArrivalMode	Hospital	Yes	Yes	Yes
